Finance section

- [ ] **Main Navigation Bar**
  - [ ] Include top-level entry point: **Finance Section**

- [ ] **Finance Sub-sections Menu**

- [ ] Deals / Soda Record *(Sale order and Purchase order)*
- [ ] Sale
- [ ] Purchase
- [ ] Receivables
- [ ] Payables
- [ ] Payment Received
- [ ] Payment Paid

- [ ] **Soda Tab Default View**
  - [ ] Display historical/previous Soda records table by default upon entering the tab.
  - [ ] Place an **"Add Soda"** button prominently
  - [ ] **Add Soda Input Form**
- **Format**

.
.
.

Date:……...(Backdate allowed)
Soda Type:……...(Dropdown to select Sale / Purchase)
Mill Selection:.....(Dropdown)
Item Selection:.....(Dropdown)
Party Selection:.....(Dropdown)
Rate:.....(Manually)
Count / Quantity Field:.....(Manually)
Soda Number:..... (Auto-Generated as per the soda type)
Note:.....(Manually)

Save & Generate Soda

.
.
.

  - [ ] **Date Selector:**
    - [ ] Standard date-picker control.
    - [ ] Default value set to Today's Date.
    - [ ] **Constraint:** Allow selection of **past/back dates** (no restriction on historical entry).
  - [ ] **Soda Type:**
    - [ ] Select Sale or Purchase.
    - [ ] The added soda will be mentioned in the Respective soda sheet/report.
    - [ ] There will be two types of Soda Report: one **Sale Soda Report** and second **Purchase Soda Report.**

- [ ] **Mill Selection:**
  - [ ] Dropdown menu populated from the Main Mill database (Eg.Goyal Agro, Beas Agro,Rajoa Agro etc).
  - [ ] Support quick search / filter within dropdown.
- [ ] **Item Selection:**
  - [ ] Dropdown menu populated from the Master Inventory / Item database.
  - [ ] Support quick search / filter within dropdown.
- [ ] **Party Selection:**
  - [ ] Dropdown menu populated from the Master Client / Party database.
  - [ ] Support quick search / filter within dropdown.
- [ ] **Rate Field:**
  - [ ] Numeric input field supporting decimal values (₹ / unit).
  - [ ] Shift will be marked.
- [ ] **Count / Quantity Field:**
  - [ ] Numeric input field for quantity/count.
- [ ] **Soda Number (Auto-Generated):**
  - [ ] Non-editable / Read-only field.
  - [ ] The soda no. will be added in chronological series. There will be two independent series running: one of Sale and other of Purchase.
- [ ] Note
  - [ ] Space for writing a special instruction.
  - [ ] This will be shown in the respective soda field.
- [ ] **Save & Generate Soda**:
  - [ ] Before saving the entry a confirmation pop-up appears.
  - [ ] There will be 2 options: Save or cancel.
  - [ ] If marked save, then reflect it in the respective soda field.
  - [ ] If marked cancel, show the Soda form with the filled details for which the Confirmation notification is generated.

Backend Logic & Validation Checklist

- [ ] **Auto-Sequence Engine:**
  - [ ] Fetch the highest existing soda_number from the database and calculate next_soda_number = current_max + 1.
  - [ ] Prevent duplicate numbers via database-level unique constraints.
- [ ] **Validation Rules:**
  - [ ] Date: Required field; back-dates allowed, future dates restricted (if required).
  - [ ] Item: Required selection from list.
  - [ ] Party: Required selection from list.
  - [ ] Rate: Must be greater than 0 (Rate > 0).
  - [ ] Count: Must be an integer greater than 0 (Count > 0).
- [ ] **Data Persistence:**
  - [ ] On submit: Save deal record and immediately update the main table to show the newly added Soda at the top.

Special cases

- [ ] In **Mill Selection** section we can select multiple Mills also.
- [ ] If multiple mills are selected then in the Party Name Main Mill cannot be entered.
- [ ] The selected mill or mills will be highlighted in the(table 2 section G,H,I) mills section.
- [ ] If in **Mill Selection** only one mill is selected, the selected mill will be shown highlighted, and then remaining 2 mills section will be shown normal with ‘0’ sign (table 2 section G,H,I).
- [ ] If an entry is made within the Main mill or mills and **shift** is marked in the **Rate** section, then reverse/mirror entry of soda type entry is made automatically at the same time.
- [ ] In this case the quantity will remain the same in both entries.
- [ ] In **Rate** section Soda Form these entries will be marked **shift** in both entries.

Case study 01
When

Date:…….09-09-2026
Soda Type:……..Sale
Mill Selection:.....Goyal Agro
Item Selection:.....Rice Broken
Party Selection:.....Beas Agro
Rate:.....Shift
Count / Quantity Field:.....03
Soda Number:..... (Auto-Generated as per the soda type)
Note……

This will be shown in the Sale Soda Record. With the respective Soda No.(System Generated)

In this case a reverse Purchase entry will be made automatically

Date:…….09-09-2026
Soda Type:……...Purchase
Mill Selection:.....Beas Agro
Item Selection:.....Rice Broken
Party Selection:.....Goyal Agro
Rate:.....Shift
Count / Quantity Field:.....03
Soda Number:..... (Auto-Generated as per the soda type)
Note……

Soda Report

- [ ] When a soda form is filled its data is shown in Soda Report.
- [ ] This is semi-auto filled Form, Section L is manual drop-down, Section M is semi

manual as it picks data from soda form and manual update too.

- [ ] Once a soda form is submit, while the soda is in midway Admin Can change count, Change Note.
- [ ] Soda form input will be shown in (Section A,B,C,D,E,F,M), With Mill selected cell will be highlighted. In front of its respective Sale order No. or Purchase order No. This also implies in both side reverse/mirror entry.

(ref. Table 02)

			Soda Report	Sale Order								
A	**B**	**C**	**D**	**E**	**F**	**G**	**H**	**I**	**J**	**K**	**L**	**M**

Mill Selection Entry Update: Section G,H,I

Mill Selection & Gate Pass Logic Checklist

1. Data Sources & Dropdown Filters

- [ ] **Gate Pass IN Logic:** If the supervisor selects "Gate Pass IN", filter and display only **Purchase Soda Numbers** in the dropdown.
- [ ] **Gate Pass OUT Logic:** If the supervisor selects "Gate Pass OUT", filter and display only **Sale Order Numbers** in the dropdown.

****

- [ ] **While cutting Gate Pass the Soda No. Section comes with an option to select Soda No. from drop-down or can select Not Applicable. Then that will be not transferred to Soda section. If any operational item gp is cut but soda no. is not selected , then it will lead to a notification to admin and respective supervisor of that mill.** (core of this finance section)**
- [ ] **Also introduce a Bill No. Section in Gate Pass. Manual Entry by supervisor. **(core of this finance section)**
- [ ] **Introduce Bag Type section in GP. With a Manual drop-down of Plastic bag or jute Bag or an option of Not Applicable. The supervisor need to select this, as this will be reflected in sale and purchase record (in further feedback).**
- ****(core of this finance section)**
- [ ] **Introduce a Bill No. option in GP. or Not Applicable option. Supervisor have to select either one.This will be manually by supervisor.**

****

2. Quota & Real-Time Balance Tracking

- [ ] **Total Limit Definition:** Store the total allowed deal count (e.g., total agreed trucks) for each Soda/Sale Order Number.
- [ ] **Completed Usage Counter:** Count all generated/cut Gate Passes linked to a specific Soda Number.
- [ ] **Remaining Quota Calculation:** Compute Remaining Trucks = Total Allowed Count - Generated Gate Passes.
- [ ] **Dropdown Visibility Rule:**
    - Show the Soda Number in the dropdown as long as Remaining Trucks > 0.
    - Hide or disable the Soda Number as soon as Remaining Trucks = 0.

Single Mill Selection Logic

- [ ] Verify that when Mill A is selected during gate pass creation, the associated Soda Number is visible exclusively to Mill A.
- [ ] Confirm that no other mill (e.g., Mill B or Mill C) can view or access the Soda Number when Mill A is selected.
- [ ] Ensure a fixed, predetermined total truck ratio/count is strictly enforced for the selected single mill.
- [ ] Verify that once the full quantity/truck count for the soda is dispatched for this mill, the

soda status updates to **Completed** and hides/locks further issuance.

Multiple Mill Selection Logic

- [ ] Verify that when multiple mills (e.g., Mill A, Mill B, Mill C) are selected, the Soda Number is accessible to all selected mills.
- [ ] Confirm that mills NOT included in the selection are restricted from seeing or accessing the Soda Number.
- [ ] Test flexible fulfillment ratios: ensure the system allows any arbitrary ratio of truck dispatches across the selected mills (e.g., 2 from Mill A, 1 from Mill B, 2 from Mill C for a 5-truck soda).
- [ ] Verify that the system does NOT force a predetermined ratio or fixed split per mill during multiple mill selection.
- [ ] Confirm that any combination of dispatches from the selected mills correctly decrements the remaining total soda quantity until the overall limit is reached.

Edge Cases & Lifecycle Constraints

- [ ] Ensure that once the aggregate total limit (e.g., 5 trucks) across all selected mills is reached, the soda automatically marks as **Completed**.
- [ ] Verify that no mill can process further gate passes against a soda once its total quota is completed, regardless of individual mill dispatch ratios.
- [ ] Confirm that changing or removing mill selections on a draft gate pass dynamically updates visibility permissions accordingly.

3. Mill Selection Matrix (Sections G, H, I)

- [ ] **Live Count Reflection:** Derive Section G, H, and I cell values directly from the count of created Gate Passes.
- [ ] **Partial Delivery Display:** If 2 out of 3 trucks have gate passes cut, display 2 in the corresponding Mill Selection cell.
- [ ] **Dynamic Updates:** Automatically increment the cell count (e.g., from 2 to 3) immediately upon the creation of the next Gate Pass.

Verification Example For a 3-truck deal:

- **Initial State:** 0 Gate Passes cut → Dropdown shows Soda Number → Mill Selection Cell = 0.
- **After 2 Gate Passes Cut:**
  - Mill Selection Cell updates to 2.
  - Dropdown still allows selection (1 remaining pass available).
- **After 3rd Gate Pass Cut:**
  - Mill Selection Cell updates to 3.
  - Soda Number is removed from the dropdown.
- [ ] This is not limited to Section G,H,I ,but the Main Mills. A new can be added later and these rules will be applicable to that mill also.

Auto-Update from Sale & Purchase Sections

- [ ] Verify that values in Table B (Reference Sections K) automatically update whenever a sale or purchase record is created or modified.
- [ ] Confirm that payment details are correctly pulled from the respective soda's official sale and purchase entries without requiring manual input.
- [ ] Ensure real-time or trigger-based syncing so that changes made in the sale/purchase modules immediately reflect in Table B.

Mill-Wise Soda Record Tracking

- [ ] Verify that payment entries in Table B dynamically update based on mill-wise soda completion data.
- [ ] Ensure that as individual truck loadings or dispatches are marked complete for a specific mill, the corresponding payment records update to reflect the completed volume.

Multi-Mill Summation Logic

- [ ] Verify that if a soda is fulfilled across multiple mills, the system correctly calculates the cumulative sum of both the payment values across all contributing mills.
- [ ] Confirm that the summed total is accurately displayed in Sale Soda Report or Purchase Soda Report as per their soda type.
- [ ] Test partial completions (e.g., Mill A completes 2 trucks, Mill B completes 3 trucks) to ensure the aggregate payment amounts match the combined total of all completed dispatches.

Data Consistency & Edge Cases

- [ ] Verify that deleting or reversing a dispatch entry in a mill-wise record correctly deducts the corresponding payment amounts from Table B.
- [ ] Ensure no double-counting occurs when summing up records for sodas associated with multiple mills.
- [ ] Confirm that zero-value entries or pending sodas do not cause errors or show incorrect blank/null values in Sections K.
- Note Sale and purchase section is in next feedback. But its linkage is shared.

Soda Status (Section J) Display & Formatting

- Verify that the Soda Status displays in the [Delivered Count] / [Total Count] format for active sodas (e.g., 0/3 when no trucks are delivered, 2/3 when 2 trucks are delivered).
- Confirm that when the total delivered count reaches the total soda count (e.g., 3/3), the status automatically changes to **Completed**.
- Ensure that sodas with zero dispatches display 0/[Total] upon creation rather than remaining empty or null.

Delivery Tracking Logic

- Verify that each completed gate pass or dispatch successfully increments the delivered truck count by 1 in real time.
- Confirm that canceling, deleting, or reversing a gate pass/dispatch decrements the delivered count accordingly (e.g., rolls back from 2/3 to 1/3).
- Ensure the system prevents dispatches beyond the total soda limit (e.g., blocks creating a 4th dispatch on a 3-truck deal).

Single & Multi-Mill Integration

- **Single Mill:** Verify that dispatches originating from a single selected mill update the central soda status correctly.
- **Multi-Mill:** Confirm that dispatches across multiple mills (e.g., 1 truck from Mill A and 1 truck from Mill B on a 3-truck soda) aggregate into the single combined status (e.g., 2/3).
- Ensure that every contributing mill sees the exact same updated aggregate Soda Status (2/3 or Completed).

Payment Status (Section L) logic

Access Control & UI Formatting

- [ ]Verify that Section L is a manual drop-down menu containing strictly three options: **Clear**, **Underway**, and **Not Clear**.
- [ ] Confirm that access to update Section L is restricted exclusively to **Admin** users.
- [ ] Ensure Section L follows the correct business logic guidelines:
    - **Underway:** Soda is in transit.
    - **Not Clear:** Soda is complete, but payment has not been made.
    - **Clear:** Payment has been fully received or processed.

Cascading Logic across Linked Records

- [ ] Verify that changing the Payment Status for a specific Soda Number in the main order updates **all linked entries** in the corresponding records in real time.
- [ ] Confirm that if a Soda Number status is marked **Underway** or **Clear**, every line item and dispatch entry tied to that Soda Number updates to **Underway** or **Clear**, respectively.
- [ ] Verify that this cascading update applies consistently regardless of whether the soda was assigned to a **single mill** or **multiple mills** (e.g., if Purchase Soda #102 spans Mill A, Mill B, and Mill C, marking #102 as **Clear** updates the status for #102 across all three mill records).

Module Separation & Scope Isolation

- [ ] Verify strict domain isolation between Sales and Purchase modules:
    - Updating a **Sale Order** Payment Status must *only* cascade to linked entries within **Sale Records**.
    - Updating a **Purchase Order** Payment Status must *only* cascade to linked entries within **Purchase Records**.
- [ ] Confirm that if a Sale Order and a Purchase Order happen to share the same reference number (e.g., Sale Soda #102 and Purchase Soda #102), updating the status in the Sale module has **zero impact** on the Purchase module, and vice versa.
