Paddy Inward Checklist

- [ ] Add an ON/OFF switch for Admin to allow updating the time and date automatically or manually for each mill separately/individually.
- [ ] Hide "Previous Truck Reading" and "KM Driven" fields.
- [ ] Display only "New Truck Reading" and a "Meter Not Working" option.
- [ ] Set default truck selection to none (currently defaults to Beas Agro PB07 34972).
- [ ] Set default Mandi Type Control option to empty (supervisor will then manually select the Control or Boli option).
- [ ] Set up auto date logic:
    - [ ] Record "Time In" and date when draft is saved.
    - [ ] Punch "Time Out" when the truck completes unloading and returns for final weight and supervisor marks his fingerprint for submitting.
- [ ] Adjust Pending Boli/Soda display logic:
    - [ ] Not editable Pending bolis/soda for selected Arthia if "**Control** (Mandi Type)" is selected.
    - [ ] Edit / type Pending bolis only if "Boli (Mandi Type)" is selected.
- [ ] Adjust Section 3 display fields for "Boli (Mandi Type)":
    - [ ] Remove "Drop of Boli Rate" section option column when Boli type is selected.
    - [ ] Remove requirement to tick box confirming Arthia entered required Boli records into system before issuing Gate Pass.
- [ ] Update Section 3 Vehicle Verification:
    - [ ] Only Bhari (Truck) video option should be made visible with a tick box.
    - [ ] Transfer the Khali video record to a new Vehicle Verification with a tick box after section 8.
    - [ ] Remove ‘Paddy Boli Record Done’ in Vehicle Verification.
- [ ] Update Section 4 Unloading Management:
    - [ ] if **Allocation type** "Hoodi" is selected, then “Upload at Hoodi Register" option cannot be marked as N/A by "Pahunch Person.
    - [ ] Create **Unloader** Master in add staff.
    - [ ] In Add staff section do not require contact no.
- [ ] Stack Drawing should belong to the current mill (Drawing already shared).
- [ ] Remove "Pahunch Person Name" in Section 4 (already included in Section 1).
- [ ] Configure 'Enter' key press functionality to move focus/cursor to the next column.

Section 4: Unloading Management

- [ ] Introduce "Unloading Start Time" and make both Start Time and Finish Time manual input fields.
- [ ] Field Name Updates:
    - [ ] Rename "Allocate Unloader" to **"Allocate Main Unloader"**.
    - [ ] Rename "Stack No." to **"Main Stack No."**.
    - [ ] Rename "Truck Unload Count Total" to **"Main Unloader Truck Count"**.

- [ ] Line Alignment & Layout:
    - [ ] Align row elements in a single line:

      Allocate Main Unloader | Main Unloader Truck Count | Main Stack No.| Bags in Main Stack.
      …… …… …….. ……

    - [ ] Align row 2 elements directly underneath:

      Part Unloader | Part Unloader Truck Count | Part Stack No. | Bags in Part Stack.
      …… …… …….. ……

    - [ ] Keep remaining elements unchanged.
- [ ] Section 4 Validation Rules:
    - [ ] Hide "Unloading Start and Finish Verification" bar code during initial creation; reveal only during updates.
    - [ ] Enforce a minimum duration of 30 minutes between "Unloading Start Time" and "Unloading Finish Time".
- [ ] **Side Transfer / Option Relocation:** Transfer the option for "Bags Rec. Less Than Agency GP" to **Section 5 — Bags Details**.

Pending Bolis Section

- [ ] Rename "Pending Bolis / Soda for Selected Arthia" to **"Pending Bolis (Selected Arthia)"**.
- [ ] Sorting & Formatting Rules:
    - [ ] Structure display date-wise.
    - [ ] Leave one empty row after a complete date section before starting the next date section.
    - [ ] Order items chronologically: Latest Boli at the top, Old Boli at the bottom.
- [ ] Status & Tick Box Rules:
    - [ ] Remove the concept of "Complete entire Soda" (apply "Complete" only to Pending incomplete Bolis).
    - [ ] ‘Complete’ can only marked in Pending boli section, and not from boli record section.
- [ ] Note Field & Auto-Fetch:
    - [ ] Remove note *"Quia Sint nobis veri..."* in place of the note in the Pending Bolis section.
    - [ ] Auto-fetch the rate directly from the Soda Record / Boli Record (Paddy Purchase and Quality).

System / Gate Pass (GP) Constraints

- [ ] Prevent repeat entry of the same truck number across all mills globally within a 2-hour window (e.g., if Truck A is bringing Paddy to Beas Agro and its Paddy Inward GP is cut, Calculate gross weight ,tare weight and net weight.)
- [ ] Enforce a minimum 2-hour gap for trucks re-entering for new trips:
    - [ ] Check condition: If a truck is sent again for lifting goods/paddy from Mandi, verify

that a minimum 2-hour gap exists from when the previous GP of that truck number was completed ("Server Yes" status in Paddy Inward and GP In/Out completed).

- [ ] Block duplicate active truck usage across mills (Case 2):
  - [ ] Restrict a truck number from being used by another mill for a new GP while its GP status is actively unloading in a mill globally.

Section 5: Bag Calculations & Layout Updates

- [ ] Introduce a **"Total Bags"** column placed on the extreme right side (next to "Shortage Received", in front of "Bags Received at Mill" and "Bags at Agency GP").
- [ ] Total in front of **Bag received at mill.** Sum of Actual total bags and Shortage bags (irrespective of Bag class A or B Class).
- [ ] Total in front of **Bags at Agency GP**.Sum of Agency bags received (irrespective of Bag class A or B Class).

Section 6: Weighbridge Integration & Weight Details

- [ ] Set up Weighbridge Integration to automatically capture and calculate:
  - [ ] **Gross Weight**, **Tare Weight**, and **Net Weight** (calculated via machine number, with manual entry allowed).
- [ ] Received Bags excluding Shortage Bags is less than Agency Bags, e.g., 7 bags less received):
  - [ ] In Shortage Record, state the count of **bags less received (e.g., 7)** in the narration.
  - [ ] Perform backend calculation: (Bags Shortage * 0.382)
    (e.g., 7 * 0.382 = 2.674).
  - [ ] Punch the calculated weight into the Shortage Record (e.g., 2.674 quintall).

  - **[ ] Add tick box option: "Bags received less than Agency GP, Inform Bauji" (in Red colour):**
  - **[ ] If this box is selected, that entry will not go to the shortage section.**
  - **[ ] This option can only be selected if the Bags recieved at Mill (excluding shortage bags) are less than the Bags as per Agency.**
  - **[ ] This is a flag entry and will be notified to the admin.**
  - **[ ] In the Inward list, ensure "Actual Received Bags" are shown.**
  - **[ ] Inward list of government bags ensure "Bags at agency GP" will be shown. Refer to Govt. inward list feedback.**
  - **[ ] Exception Rule: If "Net Weight Received" is less than the required weight, mark the weight shortage in Shortage—even if the special case tick box is enabled.**

Shortage & Excess Handling

- [ ] Support multiple shortage types in Inward Entry / Shortage Record:
  - [ ] If more than one type of shortage is received (e.g., Quality Cut Shortage AND Weight Shortage), display them separately in the **Arthia-wise Shortage Record**.
- [ ] Handling Excess Bags:
  - [ ] If excess bags are received at the mill (excluding Shortage Received from Agency GP), do **not** consider them in Shortage & Recovery.

- [ ] **Add tick box option: "Excess Weight Recieved, Inform Bauji" (in Red colour):**

- [ ] If this box is selected, the excess weight (Required Net weight-Weight received at mill).
- There will be a backend calculation will happen

- Case 01:

  Artia has 10 quintal of shortage to pay,
  In this 500 bags are received and 10 shortage bags are received.
  Net weight at mill 196 quintal
  On the agency GP there is also 500 bags.
  Then the required weight will be
  (510 agency bags * 0.382 per bag wt. In quintal)=194.82 quintal
  Now
  Net weight difference = (Required Net weight-Weight received at mill)
  = 194.82 - 196 = -1.18 Quintal
  (This shortage finding calculation is already there in the system)
  This is the excess weight we have received.
  If the tick box of …… **Excess Weight Recieved, Inform Bauji** is selected then this weight of (-1.18) quintal will be reduced from artia shortage.

  This entry will be shown in shortage register of the respective artia .

  Artia shortage Balance = 10 - 1.18 = 8.82 quintal of shortage left.

  - **[ ] This is a flag entry and will be notified to the admin.**
  - **[ ] This option can only be selected if excess weight is received.**
  - **[ ] In Mill Inward List actual weight will be shown.**
  - **[ ] Then the excess weight will be reduced from artia shortage balance.**

Draft Saving Prerequisites (Paddy Inward)

- [ ] Enforce required fields before allowing "Save as Draft":
  - [ ] Complete **Section 1**, **Section 2**, and **Section 3**.
  - [ ] Select **Pahunch Person**.
  - [ ] Enter **Gross Weight** of the truck.
  - [ ] From where supervisor can select the Save as draft Inward GP to update their net weights, bags details after unloading of truck has happened. Complete their Active Inward Gp.

Validation & Anti-Duplication Rules

- [ ] Prevent duplicate entries for **Mandi Gate Pass**:
  - [ ] Block bypass attempts using casing (small vs. capital letters).
  - [ ] Block bypass attempts using special characters.
  - [ ] Block bypass attempts using spaces alongside numbers or letters.

Quality Cut & Shortage Updates Checklist

- [ ] **Quality Cut Field Labeling:** Replace the field name 'Value' with 'Cut' in the Quality Cut section 4.
- [ ] **Quintal Conversion:** If a value is added in the Quality Cut section, display the corresponding value in quintals (e.g., introduce a "Cut in quintal" field).

- [ ] **Auto-Calculation Logic:** Set up auto-calculation when unit items (e.g., bags) are selected:
    - Example: 5 bags selected auto-calculate at 0.382 quintals per bag (5 * 0.382 = 1.91 quintals).
- [ ] **Shortage Addition:** Automatically add the calculated quintal figure to the Shortage section.
- [ ] **Narration Tracking:** In the Shortage Record, mark the narration as "5 Bags Quality Cut" (or dynamic quantity based on input).
- [ ] **Percentage Cut Handling:**
    - If the cut is entered as a percentage (e.g., 2%), calculate the value as 2% of net weight.
    - Display this calculated value under **"Cut in quintals"**.
    - Ensure this figure appears in the Shortage Record, mark the narration as "2% Quality Cut" (or dynamic quantity based on input).
