Shortage report & Reporting Tasks

- [ ] Make a daily consolidated report.
- [ ] Auto update When daily report is submitted in evening.
- [ ] Daily based reports.
- [ ] Showing Till date Shortage balance of each artia in quintal and in bags.
- [ ] Make this more presentable and also fetches data graph which mill shortages are increasing.

Date														
Mill Name	Goyal Agro				Mill Name	Beas Agro				Mill Name	Rajoa Agro			
S.No.	Artia	Mandi	Shortage in Quintals	Shortage in Bags	S.No.	Artia	Mandi	Shortage in Quintals	Shortage in Bags	S.No.	Artia	Mandi	Shortage in Quintals	Shortage in Bags
Total			Total in Quintal	Total in Bags	Total			Total in Quintal	Total in Bags	Total			Total in Quintal	Total in Bags

- [ ] Add an "Auto Narration" option in the Shortage section.

System Logic & Entry Adjustments

- [ ] Add a narration explaining the reason for the entry specifying whether it is at last column of shortage report:
    - [ ] If weight shortage is received then narration:
      Weight Shortage
    - [ ] If less bags received at mill excluding shortage bags than the Agency GP Bags then narration:
      …… Bags Shortage (in dash section mention count)

    - [ ] If quality cut is imposed in terms of bags then narration shows:
      …….Bags Quality Cut (in dash section mention count)

    - [ ] If quality cut is imposed in terms of percentage then narration shows:
      …….% Quality Cut (in dash section mention count)

    - [ ] If shortage bags are received then narration shows:
      ……. Bags Shortage Recieved (in dash section mention count)

    - [ ] If **"Excess Weight Received,Inform Bauji"** checkbox is marked and shows narration:
      'Excess Weight Received'.

- [ ] **If Shortage Bags are received** in Section 5: Ensure the "Bags Details" that will be shown in the Artia Shortage Bags section reflect this, thereby reducing their shortage liability.

Backend Calculation & Artia Shortage Logic

- [ ] **If Excess Bags are received:** Ensure the backend calculates the weight in quintals (e.g., 10 bags * 0.382 = 3.82 quintals).
- Note: Even after receiving 10 bags in shortage, the mill can even then receive a weight shortage. This will create a double entry effect.Two entries with same credentials will be displayed in that respective artia.
- [ ] **If Excess Bags are received, reduce the Artia Shortage:**
    - [ ] Automatically reduce the Artia Shortage by the calculated weight (e.g., by 3.82 quintals) with the narration: *"10 Bags Shortage Received"*.
- [ ] **If Weight Shortage is received for that same truck:**
    - [ ] Add the shortage weight entry into the Artia Shortage record.
    - [ ] Include the narration: *"weight shortage"* using the same credentials.
