Calculation & Data Presentation

- In each section, there is a calculation part which is done on the backend.
- By default it is showing Till date data from the date of first consignment dispatch report is made.
- For both **Paddy Stock** (section C) and **Rice Stock** (section D), two data values are shown:

1. Data in terms of **Consignment**.
2. Data in terms of **Bags** (shown in small font inside brackets).

- **Total work** section A will be added manually by the admin only once, all the calculation will be carried on this basis until the admin edit this.
- **Delivered till yesterday** Section B will be automatically fetched from Consignment Dispatch details.
- **Paddy Stock** Section C will auto fetch from Respective Mill Paddy Stock In Hand for bags details. Then Calculation goes like: **(Paddy Bags in hand /1154) This happens to be backend.**
  For eg. Paddy in hand at mill in Goyal is 1,00,000 bags
  Calculating Consignment in hand (in term of Paddy)
  (100000/1154)=86.65

  This will be shown as **86.65 (1,00,000)** in the section C column.

- **Rice Stock** Section D will be auto fetch from Sum of (Sum stock in hand of Produced Rice + Mansoori rice + Wand Rice + Parmal Rice + FRK) of that respective mill.Then Calculation goes like: **(Stock in hand of Produced Rice Bags + Stock in hand of Mansoori rice bags + Stock in hand of Wand Rice bags + Stock in hand of Parmal Rice bags + Stock in hand of FRK bags / 580) This happens to be backend.**
  For eg. In Goyal
  Stock in hand of Produced Rice Bags - 19000 bags
  Stock in hand of Mansoori Rice Bags - 2000 bags
  Stock in hand of Wand Rice Bags - 1000 bags
  Stock in hand of Parmal Rice Bags - 500 bags
  Stock in hand of FRK Rice Bags - 00 bags

  Total sum = 22,500 bags

  Stock in hand bags
  Calculating Consignment in hand (in term of Rice)
  (22,500 / 580)=38.79

  This will be shown as **38.79 (22,500)** in the section D column.

- **Total Stock In Hand** Section E , This is only considered in terms of consignment.This is **=Paddy stock** (C) in term of consignment **+ Rice stock** (D) in term of consignment.
  For eg. As per previous example, it comes = (86.65+38.79)=125.44

  This will be shown as **125.44** in the section E column.

- **Due Consignment** Section F will be calculated as
  = **Total work** (A) - **Delivered till yesterday** (B)

For eg .
Total work (A) of Goyal is 130 consignments.
Delivered till yesterday (B) of goyal is 02 consignments.
= **Total work** (A) - **Delivered till yesterday** (B)
= 130-02
= **128** consignments

This will be shown as **128** in the section F column.

- **Surplus / Minus** Section G will be calculated as
  = **Delivered till yesterday** (B) + **Total Stock In Hand** (E) - **Total Work** (A)

For eg . continuing the previous example
Total work (A) of Goyal is 130 consignments.
Delivered till yesterday (B) of goyal is 02 consignments.
= **Delivered till yesterday** (B) + **Total Stock In Hand** (E) - **Total Work** (A)
=02+125.44-130
= **- 2.56** consignments
This will be shown as **- 2.56** in the section G column.

This will be calculated daily at backend Daily and notify the admin when it is less than -1 consignments. Likes notifies when it is -2,-3 etc. And do not notify admin when it is like -0.8.

- The last **Total** section shows the sum of above 3 mills.This will be only shown when the data is in consolidated form.
